

FUNDING

Which funding streams can be accessed for this use? What constraints exist?

PLANNING

The direct costs associated with the proposed project involve creating a customized plan for each facility and the portfolio overall; managing relationships with City and nonprofit partners; purchasing aid-eligible equipment; scheduling professional installation; and facilitating meetings, decisions, and actions to keep the project moving forward. Does anything here raise red flags?

SOURCING

The equipment to be commissioned is Made in the US and often eligible for sole source procurement with Federal or other public funding via Service Disabled Veteran Owned Small Business GSA schedules, coops and congressional preferred supplier designations.

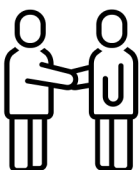

SUPPORT

Who within the larger community can champion this effort? Could structured collaboration among a community's Departments of Public Health and Homeless Services support long-term GUV use and ongoing infection control efforts in shelters and engagement centers?

EXPANSION

Are there other facilities used by unhoused/medically vulnerable people or other public facilities to include in this effort?

INVOLVEMENT

What options exist to fund and oversee the required "out-years" of maintenance and service support? Do private/philanthropic funders need to become involved to achieve this?
